ADVISORY BOARD

I. BARTOŠ
Academy of Sciences
Prague, Czech Republic

A.W. CZANDERNA
NREL Golden,
Colorado, U.S.A.

J.G. DILLARD
Virginia Polytechnic Institute
and State University
Blacksburg, Virginia, U.S.A.

D.D. ELEY
University of Nottingham
England

F. FLORES
University of Madrid,
Madrid, Spain

G. GUMBS
Hunter College
CUNY, New York, U.S.A.

V.E. HENRICH
Yale University, New Haven,
Connecticut, U.S.A.

E. ILISCA
Université Paris VII
Paris, France

R. IMBIHL
University of Hannover
Germany

R.A.L. JONES
Dept of Physics,
University of Cambridge,
England

G. KELLOGG
Sandia National Laboratories,
Albuquerque, New Mexico,
U.S.A.

A. W. KLEYN
FOM Institute for Atomic
and Molecular Physics,
Amsterdam, The Netherlands

D.M. KOLB
University of Ulm
Ulm, Germany

S. KONO
Tohoku University
Aobaku, Japan

A.G. NAUMOVETS
Institute of Physics
Kiev, Ukraine

J.B. PENDRY
Imperial College
London, England

T.N. RHODIN
Cornell University
Ithaca, New York, U.S.A.

J.L. ROBINS
University of Western Australia
Nedlands, W.A. 6009, Australia

G. SCOLES
Princeton University, Princeton,
New Jersey, U.S.A.

M. STĘŚLICKA
University of Wrocław
Poland

H. UEBA
Toyama University
Japan

M.A. VAN HOVE
University of California
Berkeley, U.S.A.

R.F. WILLIS
Pennsylvania State University
University Park, Pennsylvania,
U.S.A

K. ZHANG
Fudan University, Shanghi,
People's Republic of China

Annual Institutional Subscription Rates 1997: Europe, The CIS and Japan 1516 Dutch Guilders. All other countries US$ 936. Dutch Guilder prices exclude VAT. Non-VAT registered customers in the European Community will be charged the appropriate VAT in addition to the price listed. Prices include postage and insurance and are subject to change without notice.

List of Contents, Volume 49, 1995

Optical Characterisation of Semiconductor Surfaces and Interfaces 1
by J. F. McGILP

On the History of Photoemission 107
by H. P. BONZEL and CH. KLEINT

Preferential Sputtering in Binary Targets 155
by V. I. ZAPOROZCHENKO and M. G. STEPANOVA

Artificial Retina Membranes 197
by H. NAKANISHI

Electronic Theory of Surface Segregation in Binary Transition Metal Alloys 227
by P. MODRAK

Estimating Surface Diffusion Coefficients 265
by E. G. SEEBAUER and C. E. ALLEN

Electrochemical Oxide Film Formation at Noble Metals as a Surface-Chemical Process 331
by B. E. CONWAY

PROGRESS IN SURFACE SCIENCE, VOLUME 49

AUTHOR INDEX

Allen, C. E. 265
Bonzel, H. P. 107
Conway, B. E. 331
Kleint, Ch. 107
McGilp, J. F. 1
Modrak, P. 227
Nakanishi, H. 197
Seebauer, E. G. 265
Stepanova, M. G. 155
Zaporozchenko, V. I. 155

PROGRESS IN SURFACE SCIENCE, VOLUME 49

SUBJECT INDEX

Absorption spectra, BLMs 214, 216
Ad-layer, water hydration 432–434
Adsorbates on metals 285–290
AES. *See* Auger electron spectroscopy
Alkali metals on tungsten 283–284
Alloys
  phase stability 254
  surface change 166, 167
  surface segregation 229–243, 250–251
Angle of incidence, ion energy 161–165
Anion adsorption 358–360, 416–418, 422–431
Anion chemisorption 431–432
Anion co-adsorption 419–420
Annus Mirabilis Einstein 128
Anode surfaces, oxide states 340–341
Anodic oxide film formation, Pt 396–399
Anodic process kinetics, Pt 386–387
Anodic reversal potential, Pt 383–384
Anti-semitism 137–139
Antimony 30–33, 58–61
AR. *See* Autoradiography
Arsenic on Si 28–30, 63–64
Artificial molecular membranes 205–221
Artificial retina membranes 197–225
Atomic volumes, transition metals 240
Auger electron spectroscopy (AES) 276
Autoradiography (AR) 276
Azobenzenes 202, 203

Band structure calculations 19
Bethe-Peierls approximation, surface segregation 235–237
Bilayer lipid membrane (BLM)
  absorption spectra 214, 216
  artificial retina membrane function 217–221
  functional model 211–221
  measurements apparatus 215
Binary alloys 227–264
Binary Collision Approximation (BCA) 158–160
Binary targets 155–196
Bismuth overlayers 61
BLM. *See* Bilayer lipid membrane
Bond approach, optical response 19–20
Bulk binding energy, preferential sputtering 181–182
Bulk quantum wells 70–71

Capillarity-driven effects, surface diffusion 277
Charge transfer, Au 422–431
Charging-curve, oxide film formation 350–354
Chemical state relaxation, diffusion 272–273
Chemisorption
  anion 431–432
  segregation 256–259
Co-adsorption, anion 419–420
Coherent Potential Approximation (CPA), segregation 230–238
Compound semiconductors 44–49, 93
Connolly-Williams method 255
Contact potential difference (CPD) 275
Copper-nickel alloy 255
Coulomb interaction 237
CPA. *See* Coherent Potential Approximation
CPD. *See* Contact potential difference
Cyclic voltammetric behaviour, Au 416–418
Cyclic voltammetric determinations, surface coverage 350–354

Dember, H. 132
Diffusion coefficients
  estimation 265–330
  island growth 277–278

Diffusion parameters, surface 279–296
Diffusion under liquids 295–296, 303
Diffusivities 268–270
Duane and Hunt law 145

EC. *See* Electrocrystallization
Effective dielectric function 23–25
Einstein, A. 125–139
Electric oscillation measurement, light conversion 207, 208
Electroactive species, surface coverage 350–354
Electrochemical
  oxide film formation 331–452
  quartz 361–364
  surface processes 354
  techniques 343–350
Electrocrystallization (EC) 279
Electrodes, electroactive species 350–354
Electron, history 121–125
Electron diffraction, surface diffusion 271–272
Electronic energy calculation 230–238
Electronic theory, surface segregation 227–264, 229–243
Electrosorption 355–358, 364–370
Elemental semiconductors 84–88, 93
  adsorbate systems 84–88
  gaseous systems 86–87
  metal systems 84–86
Ellipsometry 20–37
Elster, J. 118–120, 121
Elster-Geitel cells 120, 122
Energy dependence saturation 169–172
Epiotic techniques 4–14

Field emission, diffusion 271
Film growth, kinetics 399–400
Fredenhagen, K. 130
Friedel oscillations 246

Gallium arsenide, optical properties 16–19
Gallium phosphide(110) SDR 18
Gallium on Si(111) 27–28
Gas adsorption, semiconductors 27
Geitel, H. 118–120, 121
German physics community 137–140
Germanium, SDR 39
Germanium overlayers on GaAs 61–63
Gold
  oxide formation 407–443
    anion adsorption 416–418, 422–431
    anion chemisorption 431–432
    initial stages 409–414
    mechanistic overview 435–438
    principal index planes 416–418
    sequential stages 419–421
    single crystals 419–421
    structural changes 434–435
    topographical changes 438–443
    transformation process 414–416
    water hydration 432–434
Group II-VI/III-V interfaces 65–66
Group-III deposition 64–65
Group-V substrates 64–65

Hallwachs effect 117
Hallwachs' laboratory 130
Hallwachs, W.L.F. 110, 111–116, 119, 120, 131
  biography 117–118
  Dresden 131–132
Helium bubble formation (HBF) 279
Hertz, H.R. 109–110, 114–116
Heterostructure interfaces 34
High-temperature coefficients, mass transfer 293, 294, 295
Human retina 199
Hysteresis irreversibility, oxide film formation 370–375

I-V profiles, Pt 384–386, 388–391
IBM. *See* Island boundary motion
Impurities segregation 243–251
In situ characterization, membrane forming 211–221
In situ growth monitoring 35–37
In situ RS monitoring 66
Incidence angle, steady-state surface composition 172–174
Information depth results, preferential sputtering 166–168
Insulators

intrinsic diffusion 291–292, 298–300
mass transfer diffusion 294–295, 302–303, 318–320
Intrinsic diffusion 261–292, 295–300, 303–308
See also Diffusion
insulators 291–292, 298–300, 307–308
metals 296–297, 305–307
semiconductors 291, 297–298, 307
Inverse photoemission spectroscopy (IPS) 146
Ion energy 161–165
Ion-induced compositional changes, two compounds 184–193
IPS. *See* Inverse photoemission spectroscopy
Island boundary motion (IBM) 278
Island growth 277–278
Isochromat spectroscopy 145–146

Jaffé, G.C. 130

Kinetic irreversibility, oxide film 370–375

Langmuir-Blodgett (LB) films, photo-isomerization 201, 202–204
Laser-induced thermal desorption (LITD) 275–276
Lattice occupation, electrosorption 355–358
LB. *See* Langmuir-Blodgett films
Lenard, P. 121, 122–126, 137–138
Linear laser diffraction (LLD) 275
Linear optical response, band structure 14–19
Linear optical techniques 12–14
Lipid impregnated membrane, functional models 206–211
Liquids, intrinsic diffusion 295–296
LITD. *See* Laser-induced thermal desorption
Low-temperature coefficients, mass transfer 292, 293–294, 295–296

Marx, E. 123, 133
Mass surface binding energy, changes 177–181, 183
Mass transfer diffusion 292–296, 300–303, 308–320
high-temperature coefficients 293, 294, 295
history 308–309
insulators 294–295, 302–303, 318–320
metals 292, 300–301, 316–317
physical picture 309–312
quantitative analysis 312–316
semiconductors 293–294, 301–302, 317–318
Membranes
in situ characterization 211–221
oscillation frequency changes 210
preparation 211–216
resistance changes 211
retinas 197–225
Metals
See also Noble metals; Transition metals
intrinsic diffusion 296–297
mass transfer diffusion 292, 293, 300–301, 316–317
oxidation mechanism 333–334
Microbalance studies, electrochemical quartz 361–364
Microscopic optical theory 14–20
Millikan, R.A. 134–136
Modern photoemission 140–146
Molecular beam (MB) techniques 278–279
Monte-Carlo simulations 160–161
Multi-pore metal substrate, BLMs 213

Near-surface quantum wells 72–76
Noble metals 331–452
See also Oxide film formation phenomenology 333–375
Non-UHV studies, compound semiconductor growth 50–51
Nonlinear response theory 19, 76–81

Optical characterization
GaAs 16–19
oxide films 360–361

semiconductor interfaces 1–94
Optical response of materials 5, 19–20
Optical second-harmonic generation (SHG) 88–91
Optical sum-frequency generator (SFG) 88–91
Ordering, surface segregation 251–256
Overlayers 58–67
abrupt interfaces 58–64
Oxidation
Au 457–443
Pt 376–407
Rh 444
Oxide film formation
noble metals 331–452
anion adsorption effects 358–360
background 334–343
electrochemical techniques 343–350
optical characterization 360–361
surface coverage 350–354
surface lattice occupation 355–358
Oxide states, anode surfaces 340–341

PE. *See* Photoemission
Phase-oxide layers, Pt 392–395
Photo-induced isomerization reaction 201–205
Photo-signal conversion, electric signal 209–211
Photoabsorption 41–43
Photoelectric effect
history 109–132
quantitative experimental data 128
Photoemission (PE) 107–153, 139–146, 278
Photoluminescence spectroscopy 67–76
bulk quantum wells 70–71
near-surface quantum wells 72–76
semiconductor recombination 69–70
surface quantum wells 71–72
Photon concept 126, 128
Photoreception process 200, 201
Photoreceptor cell, retina 207
Photoresponsive membranes 201–205
Platinum
surface oxidation 376–407
anodic limit 396–399
formation 376–383, 391–400, 402
i-V profiles 384–386, 388–391
quasi-2-d state 391–395
reversibility 383–388
structure changes 405–407
thick films 400–405
Pre-electron discoveries 109–120
Preferential sputtering 155–196
analytical theory 158–165
correlations 177–181
data choices 166–168
energy dependence of surface composition 169–172
experimental results 165–181
information depth results 166–168
ion-induced compositional changes 184–193
target composition 175–176, 178–179
Profile evaluation, diffusion 274–276

QENS. *See* Quasi-elastic neutron scattering
Quantum of light history 125–132
Quasi-elastic neutron scattering (QENS) 278

Raman spectroscopy (RS) 53–67
overlayers 58–64
reactive overlayers 64–67
scattering 11, 54–57
Ramsauer, C. 133
Random alloys, surface segregation 229–243
RAS. *See* Reflection anisotropy spectroscopy
RBS. *See* Rutherford backscattering
Reactive overlayers 64–67
Real surface characteristic, spectroscopies 141
Real time RS monitoring, ZnSe growth 66
Recombination at semiconductor interfaces/surfaces 69–70
Reconstruction, semiconductor surfaces 26–27

Reflection anisotropy spectroscopy (RAS) 43–53
Reflection difference techniques 37–53
  anisotropy spectroscopy 43–53
  differential reflectivity 37–41
  photoabsorption 41–43
Reflection SHG geometry 80
Refractory metals on tungsten 281
Resonant three wave mixing 89
Retina
  function modeling 199–201
  membranes 197–225
  photoreceptor cell 207
  structure 199
Rhodium, surface oxidation 444
RS. *See* Raman spectroscopy
Rutherford backscattering (RBS) 276, 278

JOURNAL PACKAGES

Information on money-saving ways to buy journals such as...

Atmospheric Environment
Biochemical Pharmacology
Environmental Pollution
Life Sciences
Neuropharmacology
Neuroscience
Tetrahedron Letters
Trends in Pharmacological Sciences

Which Libraries Benefit?

Those libraries which take all the journals from a package will see an immediate benefit and saving. Libraries which take all but one of the journals may find that they can buy the missing title for a nominal amount.

What Should Libraries Do Next to Take Advantage of These Packages?

Subscription Agents have been informed about these money-saving packages and are in a position to help librarians take advantage of the savings offered. You may, of course, contact your nearest Regional Sales Office directly for more information and help.

CONTACT YOUR NEAREST ELSEVIER SCIENCE OFFICE FOR FURTHER INFORMATION

For customers in the Americas (North, South and Central America):
Elsevier Science, Regional Sales Office, Customer Support Department, 655 Ave of the Americas, New York, NY 10010, USA ☎ Telephone: +1-212-633-3730 Toll-free for customers in the USA and Canada: 1-888-437-4636 (1-888-4ES-INFO) 🖷 Fax: +1-212-633-3680 🖳 E-mail: usinfo-f@elsevier.com

Far East and Australasia (except Japan):
Elsevier Science Pte Ltd, Regional Sales Office, No. 1 Temasek Avenue, #17-01 Millenia Tower, Singapore 039192

CONTENTS DIRECT

Tables of Contents by e-mail

It's Direct
Too busy to surf the Net? ContentsDirect comes directly to you.

It's Free
ContentsDirect is provided as a service to individuals interested in our journals. There is no charge.

It's Pre-Publication
The Contents message will arrive directly on your pc approximately two to four weeks prior to a journal's appearance in libraries.

It's Easy
There is no training required. If you use e-mail then you can receive ContentsDirect.

It's Frequent and Regular
Every time a journal issue is published, it will be preceded by its own ContentsDirect update.

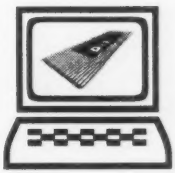
Which Journals?
For a list of ContentsDirect journals, please send an e-mail message to **cdhelp@elsevier.co.uk**

How to Subscribe by E-mail
Send a message to **cdsubs@elsevier.co.uk** giving the following information:

- Your name
- Your e-mail address
- Your full postal address and fax number
- The journals for which you would like to receive the ContentsDirect service.

How to Subscribe by Post or Fax
Send the information above to your nearest Elsevier Science office.

Journal contents pages delivered directly to your pc for free!
Don't wait for your existing contents service to catch up - sign up today!



IMPORTANT: ContentsDirect can be sent to your Internet e-mail address only. If in doubt about your Internet e-mail address, contact your institution's information technology/telecommunications department for advice.
